Kate Schultz is a data scientist in the Computational Biology Group at Pacific Northwest National Laboratory. She conducts research and develops software to advance AI-assisted computational capabilities in areas including in silico drug discovery, computational toxicology, chemical space analysis, and metabolomics. Her research has been published in the Journal of Chemical Information and Modeling and Physical Chemistry Chemical Physics. She holds a B.S. in Chemical Engineering from the University of Washington and an M.S. in Computer Science from Northeastern University.
